

DOE/IHEA Materials Forum

**Oak Ridge National Laboratory
Oak Ridge, Tennessee
Building 4515, Conference Room 240
February 5-6, 2003**

TABLE OF CONTENTS

RESEARCH BRIEFS

- I. Advanced Nanoporous Composite Materials for Industrial Heat Applications
Michael Ayers and Arlon Hunt (Lawrence Berkeley National Laboratory)**
- II. Advanced Refractory Materials Research Program, DOE Albany Research Center
Cynthia Powell Dogan (Albany Research Center)**
- III. Advanced Wrought Alloys with Improved High Temperature Performance for
Waste Heat Recovery Systems
Philip J. Maziasz (Oak Ridge National Laboratory)**
- IV. High-Temperature Alloys
Vinod K. Sikka (Oak Ridge National Laboratory)**
- V. PNNL High-Temperature Materials Capabilities
Charles H. Henager, Jr. and Russell H. Jones (Pacific Northwest National
Laboratory)**
- VI. Low Cost Ceramic Composite Fan Materials
Ron Ott (Oak Ridge National Laboratory)**
- VII. Materials Degradation Processes in Elevated-Temperature Environments Relevant
to Process Heating
Peter F. Tortorelli (Oak Ridge National Laboratory)**
- VIII. Materials for Low-Cost Sensor Array System for High-Temperature Gas
Measurement
Tim R. Armstrong and James E. Hardy (Oak Ridge National Laboratory)**

- IX. Materials Test Methods, Alloy and Ceramic Selection and Development for Elevated Temperature and Aggressive Environments**
Dennis Bickford (Savannah River Site)
- X. Modeling of Thermo-Chemical-Kinetic Reactions Between Gas – Liquid – Glass – Metal in Industrial Process Heating Environment**
Theodore M. Besmann and Sudarsanam S. Babu (Oak Ridge National Laboratory)
- XI. Monolithic and Surface Modified Ceramics**
Andrew A. Wereszczak (Oak Ridge National Laboratory)
- XII. Surface Modification and Thermomechanical Properties of Refractory and Insulation Materials**
Terry Tiegs (Oak Ridge National Laboratory)
